

# GroundUp AI — V2 Database Schema (33 Core Tables)

Full Lifecycle Financial Control Baseline (Acquisition !' Budget !' Spend !' Draw !)

| VERSION | TABLES | DOMAINS | RELATIONSHIPS | PRINCIPLES | DATE            |
|---------|--------|---------|---------------|------------|-----------------|
| 2.0.0   | 33     | 10      | 104           | 8          | October 5, 2026 |

## Architectural Core Principles

| #  | Core Engineering Principle                                                                                                                                            |
|----|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| #1 | Separate the Four Truths: Budget Truth, Spend Truth, Funding Truth, and Progress Truth must never be collapsed into one transaction object.                           |
| #2 | Never guess a number: Every financial fact must originate from an approved contract, invoice, or cleared bank transaction.                                            |
| #3 | AI proposals are not truth: OCR and AI document extractions remain pending proposals until human verification confirms them.                                          |
| #4 | Original budgets are immutable: Approved baseline amounts are never rewritten; modifications must be approved change orders or contingency movements.                 |
| #5 | Only cleared cash is Funding Truth: Submitted or approved lender draws do not count as funded until the bank transaction is cleared.                                  |
| #6 | Preserve draw lineage: Revised or rejected draws create a child revision (parent_draw_id) rather than mutating the historical submission.                             |
| #7 | Inter-project transfers are neutral: Temporary loans or capital movements between projects are reconciled separately and never counted as project revenue or expense. |
| #8 | Complete organizational isolation: Multi-tenant safety with strict foreign-key integrity and RLS policies across all 33 core tables.                                  |

## Functional Domains & ERD Layout Blueprint

| ID                       | Functional Domain            | Story Stage | Count    | Included Models (Hubs Marked)                                                                      |
|--------------------------|------------------------------|-------------|----------|----------------------------------------------------------------------------------------------------|
| 1. Core & Team           | Organization & Team          | core        | 3 tables | organizations (Hub), users (Hub), parties (Hub)                                                    |
| 2. Projects & Economics  | Projects & Economics         | projects    | 3 tables | projects (Hub), acquisitions, project_financial_plans                                              |
| 3. Financing & Contracts | Financing & Contracts        | financing   | 2 tables | loans (Hub), construction_contracts                                                                |
| 4. Budgets & Changes     | Budgets & Changes            | budget      | 5 tables | budgets (Hub), budget_lines (Hub), contingency_movements, change_orders, change_order_lines        |

| 8. Progress & Proof     | Timeline & Progress     | progress    | 5 tables | project_milestones (Hub), progress_records, progress_evidence, inspections, permits   |
| 9. Equity & Disposition | Investors & Disposition | investors   | 4 tables | project_investors (Hub), investor_contributions, investor_distributions, dispositions |
| 10. Audit & Alerts      | Audit & Alerts          | audit       | 2 tables | alerts (Hub), audit_events (Hub)                                                      |

# Complete Data Dictionary (All Tables & Attributes)

Detailed column types, primary/foreign key relationships, nullability, percentage explanations, and business roles.

#01 organizations

Domain: Organization & Team

• Role: Company Workspace / Tenant Boundary | • Stores: Tenant identity, organization name, account status, timestamps | • Key Use: Top-level tenant boundary isolating all enterprise data and projects

| Column Name | Type                     | Key | Null     | Notes / Percentage Meaning |
|-------------|--------------------------|-----|----------|----------------------------|
| id          | uuid                     | PK  | NOT NULL | Default: gen_random_uuid() |
| name        | varchar(255)             | -   | NOT NULL | -                          |
| status      | enum(OrganizationStatus) | -   | NOT NULL | Default: ACTIVE            |
| created_at  | timestamptz              | -   | NOT NULL | Default: now()             |
| updated_at  | timestamptz              | -   | NOT NULL | Default: now()             |
| deleted_at  | timestamptz              | -   | NULL     | -                          |

#02 users

Domain: Organization & Team

• Role: Authenticated Application Users & RBAC | • Stores: User identity, credentials, tenant link, organizational role, account status | • Key Use: Authentication, authorization, and audit attribution

| Column Name     | Type             | Key                 | Null     | Notes / Percentage Meaning |
|-----------------|------------------|---------------------|----------|----------------------------|
| id              | uuid             | PK                  | NOT NULL | Default: gen_random_uuid() |
| organization_id | uuid             | FK -> organizations | NOT NULL | -                          |
| auth_user_id    | uuid             | -                   | NULL     | UNIQUE                     |
| email           | varchar(320)     | -                   | NOT NULL | UNIQUE                     |
| first_name      | varchar(120)     | -                   | NULL     | -                          |
| last_name       | varchar(120)     | -                   | NULL     | -                          |
| role            | enum(UserRole)   | -                   | NOT NULL | -                          |
| status          | enum(UserStatus) | -                   | NOT NULL | Default: INVITED           |
| created_at      | timestamptz      | -                   | NOT NULL | Default: now()             |
| updated_at      | timestamptz      | -                   | NOT NULL | Default: now()             |

#03 projects

Domain: Projects & Economics

• Role: Capital Project Master Container | • Stores: Site location, stages, lifecycle dates, GC and lender party links | • Key Use: Core entity anchor linking all financial, schedule, and contract data

| Column Name                 | Type                | Key                 | Null     | Notes / Percentage Meaning |
|-----------------------------|---------------------|---------------------|----------|----------------------------|
| id                          | uuid                | PK                  | NOT NULL | Default: gen_random_uuid() |
| organization_id             | uuid                | FK -> organizations | NOT NULL | -                          |
| created_by_user_id          | uuid                | FK -> users         | NOT NULL | -                          |
| owner_user_id               | uuid                | FK -> users         | NOT NULL | -                          |
| general_contractor_party_id | uuid                | FK -> parties       | NULL     | -                          |
| primary_lender_party_id     | uuid                | FK -> parties       | NULL     | -                          |
| name                        | varchar(255)        | -                   | NOT NULL | -                          |
| site_address                | varchar(500)        | -                   | NOT NULL | -                          |
| project_type                | varchar(100)        | -                   | NULL     | -                          |
| units                       | integer             | -                   | NULL     | -                          |
| stage                       | enum(ProjectStage)  | -                   | NOT NULL | Default: ACQUISITION       |
| status                      | enum(ProjectStatus) | -                   | NOT NULL | Default: SETUP             |
| start_date                  | date                | -                   | NULL     | -                          |

| Column Name                      | Type       | Key | Null     | Notes / Percentage Meaning |
|----------------------------------|------------|-----|----------|----------------------------|
| baseline_completion_date         | date       | -   | NULL     | -                          |
| current_forecast_completion_date | date       | -   | NULL     | -                          |
| actual_completion_date           | date       | -   | NULL     | -                          |
| created_at                       | timestampz | -   | NOT NULL | Default: now()             |
| updated_at                       | timestampz | -   | NOT NULL | Default: now()             |
| deleted_at                       | timestampz | -   | NULL     | -                          |

#### #04 parties

Domain: Organization & Team

• Role: Counterparty & Vendor Directory | • Stores: Legal names, contact info, counterparty type (GC, lender, vendor, investor) | • Key Use: Normalized entity directory replacing raw string counterparty names

| Column Name     | Type            | Key                           | Null     | Notes / Percentage Meaning |
|-----------------|-----------------|-------------------------------|----------|----------------------------|
| id              | uuid            | <b>PK</b>                     | NOT NULL | Default: gen_random_uuid() |
| organization_id | uuid            | <b>FK -&gt; organizations</b> | NOT NULL | -                          |
| party_type      | enum(PartyType) | -                             | NOT NULL | -                          |
| legal_name      | varchar(255)    | -                             | NOT NULL | -                          |
| display_name    | varchar(255)    | -                             | NULL     | -                          |
| email           | varchar(320)    | -                             | NULL     | -                          |
| phone           | varchar(50)     | -                             | NULL     | -                          |
| address         | varchar(500)    | -                             | NULL     | -                          |
| created_at      | timestampz      | -                             | NOT NULL | Default: now()             |
| updated_at      | timestampz      | -                             | NOT NULL | Default: now()             |

#### #05 acquisitions

Domain: Projects & Economics

• Role: Property Acquisition Economics | • Stores: Purchase price, closing costs, legal fees, recording fees, initial equity | • Key Use: Isolates property buy costs outside the construction budget

| Column Name             | Type          | Key                       | Null     | Notes / Percentage Meaning |
|-------------------------|---------------|---------------------------|----------|----------------------------|
| id                      | uuid          | <b>PK</b>                 | NOT NULL | Default: gen_random_uuid() |
| project_id              | uuid          | <b>FK -&gt; projects</b>  | NOT NULL | UNIQUE                     |
| acquisition_date        | date          | -                         | NULL     | -                          |
| purchase_price          | numeric(18,2) | -                         | NOT NULL | -                          |
| closing_costs           | numeric(18,2) | -                         | NOT NULL | Default: 0                 |
| legal_costs             | numeric(18,2) | -                         | NOT NULL | Default: 0                 |
| recording_fees          | numeric(18,2) | -                         | NOT NULL | Default: 0                 |
| other_acquisition_costs | numeric(18,2) | -                         | NOT NULL | Default: 0                 |
| initial_equity          | numeric(18,2) | -                         | NOT NULL | Default: 0                 |
| source_document_id      | uuid          | <b>FK -&gt; documents</b> | NULL     | -                          |
| notes                   | text          | -                         | NULL     | -                          |
| created_at              | timestampz    | -                         | NOT NULL | Default: now()             |
| updated_at              | timestampz    | -                         | NOT NULL | Default: now()             |

## #06 loans

Domain: Financing &amp; Contracts

• Role: Project Debt Financing Facility | • Stores: Commitment amount, interest rate, payment method, maturity, lender party link | • Key Use: Tracks acquisition and construction loan agreements and interest reserve

| Column Name              | Type                        | Key             | Null     | Notes / Percentage Meaning |
|--------------------------|-----------------------------|-----------------|----------|----------------------------|
| id                       | uuid                        | PK              | NOT NULL | Default: gen_random_uuid() |
| project_id               | uuid                        | FK -> projects  | NOT NULL | -                          |
| lender_party_id          | uuid                        | FK -> parties   | NOT NULL | -                          |
| loan_type                | enum(LoanType)              | -               | NOT NULL | -                          |
| loan_reference           | varchar(255)                | -               | NULL     | -                          |
| commitment_amount        | numeric(18,2)               | -               | NULL     | -                          |
| interest_rate            | numeric(7,4)                | -               | NULL     | -                          |
| interest_rate_type       | varchar(50)                 | -               | NULL     | -                          |
| interest_payment_method  | enum(InterestPaymentMethod) | -               | NOT NULL | -                          |
| interest_reserve_initial | numeric(18,2)               | -               | NOT NULL | Default: 0                 |
| loan_start_date          | date                        | -               | NULL     | -                          |
| loan_maturity_date       | date                        | -               | NULL     | -                          |
